Shawn Vinje Project Review

Quality of Work:
- 3 Points
- The code looks good and the readme does a great job of telling what the project is about as well as what progress has been made. I do not think any changes need to be made except for continuing on with the project.

Intellectual Merit:
- 3 points
- The project looks to be interesting and substantive. It will use a broad range of technologies and has enough complexity. It looks like it can be done in a semester.

Video:
- 3 points
- The video gives a clear picture of the project. It does well at showing the goals of the project as well as what progress has been made on the project so far. No changes are needed.
